PHP test 0.1

Test Project

Design a sample system to capture customer data like name, email, telephone number, company name and a profile image.

we should be able to add daily notes to each customer.

We should be able to check the customer data with list of daily notes in a window.

User should be able to delete / update the customer data.

A simple login form should be implemented.

Please give the following with your solution

01. Database ER.
02. User test Cases.
03. Commit to the GIT Repository
04. Publish to the given server
05. Prepare a Training Module
